Pizza World

Pizza World is a pizza shop management system build using HTML, W3.CSS, PHP and JavaScript. PostgreSQL is used as database and PL/pgSQL is used as the backend logic.

Prerequisites:

The following environment is required in order to run the project:

- ✓ Xampp (version 3.2.4 or higher)
- ✓ pgAdmin 4 (v.4)
  - PostgreSQL with PL/pgSQL installed (recommended: 9.5 or higher)
- ✓ Any updated web browser. (Recommended: Firefox or Chrome)

How to Run:

- ➢ Setup the environment properly.
- ➢ Copy the folder named '**pizzaworld**' to the '**htdocs**' folder. (**C:\xampp\htdocs**)
- ➢ Run the **xampp**, strat **Apache** server.
- ➢ Run **pgAdmin 4 v4** from the start menu. Open the server
- ➢ Right click on the database named '**postgres**' and click **restore**.
- ➢ Brows '**postgres.sql**' file from the project folder and load it to the database.
- ➢ Go to new tab of the browser
- ➢ Write http://localhost/pizzaworld/homepage.php in the address bar.
- ➢ To enter into the baker menu, **Username** : baker **Password**: baker
